

Hi, I'm Evgeny (Eugen) Shchekochikhin, 39 y.o.

Who am I: I'm an engineer/developer. Professionally for five years already, for fun since middle school. Currently working at "Dynatech", creating/extending/supporting back-end systems and diving into operations and front-end territory.

What I can do: I can get the job done. As a standalone developer, as a team member, as an organizer. I prefer to work in a team. I'm able to communicate, listen and learn. I own my decisions and mistakes.

Speaking of tech, I'm good with programming itself and PHP in particular. Service Oriented Architecture, LAMP stack, OOP, MVC frameworks (mostly Symfony-based), queues, patterns, all that jazz. I'm ok with front-end (js/ts, vue/angular/react) but I don't really like it. I can set up a project environment (version control, relational database, cache, containerization, build tools...).

My primary language is Russian; I can communicate in English just fine; barely speak Latvian.

What I want: To continue my "actual (software) engineer" quest, keep learning, keep doing useful things.

What I want from you: Human decency and quite ethical business. I want to work with people who care. Enough flexibility and freedom to actually keep work-life balance. Salary around 2000€.

My linkedin profile with mugshot is here:
