

Hi, I'm Evgeny Shchekochikhin, 38 y.o.

Who am I: I'm a developer. Professionally for four years already, for fun since middle school. Currently working at "Dynatech", mostly creating/extending/supporting/ PHP back-end systems and diving into operations and front-end territory.

What I can do: I can get the job done. As a standalone developer, as a team member, as an organiser. I think that's important. And I keep learning.

I'm able to communicate, listen and learn. I own my decisions and mistakes.

Speaking of tech, I'm good with programming itself and PHP in particular. Service Oriented Architecture, LAMP stack, OOP, frameworks (mostly Symfony-based), queues, patterns, all that jazz. I'm ok with front-end (js/ts, vue/angular) but I don't really like it. I can set up a project environment (version control, relational database, cache, containerization, build tools...).

My primary language is Russian, I can communicate in English just fine, I barely speak Latvian.

What I want: To continue and expand my career making something important. I'm ready to learn new things, e.g. Java or React and new roles (mentor, team lead?).

What I want from you: Human decency and quite ethical business. I want to work with people who care. Enough flexibility and freedom to actually keep work-life balance. Salary around 1.8k€.
