Hello, World!

Who am I: I'm Evgeny (Eugen) Shchekochikhin, 40 y.o. from Latvia.

Also I'm an engineer/developer. Professionally for six years already, for fun since middle school. Introverted, rational, anarchy roots, father, simple man. I value honesty and quality.

What I can do: I can get the job done. As a standalone developer, as a team member, as an organizer. I prefer to work in a team. I'm able to communicate, listen and learn. I own my decisions and mistakes.

Speaking of tech, I'm good with programming itself and PHP in particular. Service Oriented Architecture, LAMP stack, OOP, MVC frameworks (mostly Symfony-based), event queues, patterns, all that jazz. I don't like front-end ecosystem but I have some experience with it (plain javascript/typescript, angular/vue/react, bundling…). I like HTML, though.

I'm always curious about other tools and technologies, so I'm ready to try them (nodejs, golang, back to python, C-family… you name it).

I'm ok with devops things (CI/CD, containerization, orchestration and Linux ecosystem in general).

My primary communication language at work is English nowadays (default for years). I speak Russian (native), I understand Latvian a little bit (but I don't feel confident with it).

What I want: To continue my "actual software engineer" quest, keep learning, keep making solid helpful products.

What I want from you: Human decency and quite ethical business. I want to work with people who care. Enough flexibility and freedom to actually keep work-life balance. Challenges and complexity. Salary from 2000€.
